Mobile partition walls

Preventive measures for
a safe everyday life.

Mobile Partition Walls

Protective elements for a higher sense of security of your guests.

To protect your guests as well as your employees we recommend installing mobile partition systems in your restaurant or bar area.

The partition wall consists of two aluminium poles and a fabric panel which is stretched between the poles and thus provides the necessary protection between two tables. The mobile partitions can be extended modularly. The arrangement of the partitions can thus be flexibly designed according to the room conditions. Corner solutions, niche solutions and connected partitions are possible.

The colour of the poles can be chosen from our 3 standard colours black, ecru and white whilst the fabric panel can be printed individually. Alternatively, the fabric panel can also be replaced by transparent PVC. Thus the protective separation system can be individually adapted to your ambience.

Protection and design element at the same time. You are a beverage manufacturer? Use the partition walls for your advertising!

Overview of models
